Does Dizzion support WebCams?

Yes, Dizzion Frame Remoting Protocol (FRP_ enables users to use webcams and microphones seamlessly within their virtual machine, all natively, with no additional plugins or software required. This capability fully integrates into the protocol, ensuring a consistent, high-quality experience across various endpoints and collaboration tools. Our design philosophy is rooted in simplicity: FRP features such as webcam support are enabled with a single click, requiring no complex configurations. When enabled by administrative policy, the webcam can be seamlessly selected and used within the Windows or Linux session, providing a native and straightforward user experience
