

What is a Dizzion virtual desktop, and why is my company using it?

Dizzion DaaS and Cloud PC solutions provide secure access to corporate desktops and applications from any device, anywhere—using only a browser. Virtual means that the desktops and apps run in a datacenter or public cloud, not on the local device. This approach offers strong security, simplified management, and a seamless user experience, as applications run close to backend systems and data. It's also easier to enforce backups and security policies centrally.
