

Deployment Groups

"Deployment Groups" determine when a Frame Account (Sandbox, Test/Production Pools, Persistent Desktops, and/or Utility Servers) will receive the latest version of the Frame Guest Agent (FGA), Frame Server, and any associated drivers or components. Deployment groups can be configured at the account level by navigating to the **Settings** page in the account Dashboard and clicking on the **Deployment group** tab.

Accounts are placed in the **Standard** deployment group by default. Customers who wish to receive the latest FGA version in advance for testing and validation purposes can choose to place their Account(s) in the **Early Adopter** deployment group. Early Adopter accounts typically receive the newest Frame Server release 2 to 6 business days before Standard deployment group accounts.
