

Expand Drive Size

The Frame platform gives admins the ability to expand the drive size of their Sandbox or Utility server as necessary from the Dashboard console.

- Once you start the drive size increase process, you cannot roll back to a smaller volume size.
- Customers using Azure infrastructure must adhere to their standardized disk sizes, as discussed in their official [documentation](#).

1. First, navigate to the Dashboard of your account. You will land on the **Systems** page where your Sandbox and Utility Server can be managed.
2. Click on the ellipsis icon next to your Sandbox or Utility server and select **Increase disk size** from the drop down menu.
