

DaaS Flex Credit Rates

Flex Credits offer a consumption-based pricing model that gives you full freedom to scale, resize, and reallocate desktops without modifying your contract. Choose from prepaid annual commit, monthly pay annual commit, or no-commit options.

To calculate estimated Flex Credits required, find the appropriate DaaS product, then multiply the Flex Credit price by the number of VMs or users. Repeat this step for each applicable Add-On product, then add the values together to get your total monthly Flex Credit budget. For prepaid annual commit, multiply by 12.

Example:

- Standard per VM at 26 credits per VM per month for 50 VMs = 1,300 credits per month x 12 months = 15,600 credits annually
- Dizzion Halo at 15 credits per user per month for 100 users = 1,500 credits per month x 12 months = 18,000 credits annually
- 15,600 + 18,000 = 33,600 credits annually

Per User

Standard: 18 credits per user per month

Education: 12 credits per user per month

Per VM

Standard: 26 credits per VM per month

Education: 16 credits per VM per month

Add-On Products

Product Name	Description	Flex Credit Price	Unit of Measure
Security Pulse	Vulnerability & Risk Monitoring for Cloud PCs	12	Per Cloud PC VM Per Month
